Water Damage Restoration

Custom techniques are used by professional restoration companies like **RESTORx** to dry and remove trapped water and water vapor from surfaces, flooring, interior building cavities and building contents. An untreated water damage may cause floors to buckle, wall damage, content damage, and allow mold and bacteria to grow. **RESTORx** personnel have been extensively trained to provide customers with State of the Art techniques in identifying and remediating the effects of water damage. **RESTORx** has a large inventory of drying equipment, along with the most sophisticated moisture detection equipment available. The most important aspect in dealing with water damage is an immediate response upon discovery. A delay of even 48 hours can result in significantly more damage versus an immediate timely response. **RESTORx** personnel are "On Call" 24 hours a day, 7 days a week, 365 days a year to respond to any of your water damage needs, whether it is residential, commercial or institutional.

- Q. I had water everywhere, but I think I have it all dried up. Do I still need **RESTORx**?*
- A. Yes.** Water gets into walls and floor cavities, sub flooring and carpet backing. The water you don't see now will cause rot, mold, fungus and bacteria later. Unless you have moisture testing devices and sophisticated drying equipment, it will cost you more money to wait.

Why Choose RESTORx?
Because we really care about the quality of our work, and about YOU!
